MARKETS PREVIEW

25th of April 2016, to 29th of April 2016

Central bank decisions and GDP reports were the big event this week which kept the markets volatile. The Federal Reserve's April monetary policy meeting showed that the central bank continued to keep an accommodative monetary policy, leaving the Fed funds rate unchanged at 0.25% - 0.50%. In its statement, the language was little changed but with removal of some key phrases, the markets were divided on what the next move from the central bank will be. Meanwhile, the CME Future's Fed funds watch continues to show a small probability of a rate hike with the consensus largely expecting to see rates remaining steady in June.

The RBNZ also met this week and in a close call left monetary policy unchanged. The RBNZ's key lending rates remained unchanged at 2.25% but the RBNZ noted that further easing was on the table. The kiwi jumped on the news and continued to maintain its bullish momentum against a weaker US dollar.

The big event of the week was however the Bank of Japan which left interest rate unchanged at -0.10% while leaving the QE purchases steady at 80 trillion yen with a minority of dissenters. As the markets built in expectations ahead of the event in hopes of a rate cut, the yen rose sharply on the BoJ's inaction which sent USDJPY back to the 17-month lows briefly trading near the 107 - 106 levels on Friday.

RBNZ Interest Rates (April 2016)

On the economic front, preliminary GDP reports from the US and the UK showed both the economies entering the year on a subdued note. The US economy expanded at a pace of 0.50%, following Q4 2015's GDP growth of 1.70%, while in the UK, Q1 GDP was at 0.40%, with weak manufacturing playing a big role in both the economies, additionally

with the concerns on Britain's EU membership referendum. However, the British Pound did not react much to the weak data with investors mostly focused on the Brexit concerns, amid a short covering and a weaker US dollar, the British pound closed the week on a higher note.

UK GDP Growth Rate (Q1 2016)

2nd of May 2016, to 6th of May 2016

Looking forward to the week ahead, the Federal Reserve, RBNZ and the BoJ will be up in focus over a short 12-hour period, starting April 27th. No changes are expected from the Fed or the RBNZ, where interest rates are at 0.25% - 0.50% and 2.25% respectively. In the absence of any changes to monetary policy, the central bank's statement will gain focus. The markets remain divided on how the Federal Reserve will word its statement and a continued dovish stance could further hurt the US dollar. Meanwhile, markets expect the RBNZ to strike a harsh tone to stem the Kiwi's strong exchange rate appreciation.

The Bank of Japan's monetary policy is of course a big guessing game. While analysts expect no change to policy, there is a chance that the BoJ could move in April.

On the economic front, GDP reports from the US and the UK will be in focus. Estimates on both the advanced GDP reports are expected to show the first quarter of 2016 starting off on a slow note. In the US, Q1 GDP is expected to rise 0.70% while in the UK the Q1 2016 GDP is expected to rise 0.40%.

TECHNICAL CORNER

USDCHF has been declining over the past few sessions after prices rally briefly to test 0.9785 earlier in the week. The current retracement comes off the initial bounce off the falling wedge pattern on the daily chart, which could indicate a potential move to the upside. Price action is currently trading close to the support zone near 0.9581 - 0.9536. Establishing support here could potentially pave the way for USDCHF to break out strongly higher, with the initial resistance at 0.9728 - 0.97830 resistance, following which further upside could be seen towards 0.9974 levels.

Alternately, if USDCHF breaks the lower support near 0.9536, we could expect to see further declines, which could push USDCHF lower to 0.94 levels..

USDCHF (0.9591) – Daily Chart

The Stochastics on the daily chart is currently likely to post a higher low against price's lower low in comparison to previous price action. The monthly chart on USDCHF has closed in a spinning bottom pattern and a potential close to the upside on the monthly chart could see USDCHF move towards 1.0 handle quickly.
