MARKETS PREVIEW

11th of April 2016, to 15th of April 2016

Economic data over the past week saw a mix of fundamentals as well as some strong moves in the markets. The Fed's meeting minutes were released this week from the March policy meeting. As expected, the FOMC minutes conveyed the dovish tone in the Fed's statement. Although there were discussions about a rate hike in April, the risks to inflation was seen to be more serious warranting a hold on monetary policy. Across the Atlantic, the ECB's meeting minutes showed that members of the ECB's governing council were unanimous in tackling slow growth and deflation in the region. While EURUSD attempted to post some gains this week, comments from ECB members including Mario Draghi managed to keep the euro subdued for the most part.

The Japanese yen saw one of the strongest gains this week as USDJPY fell to lows of 108 this week. USDJPY fell with a mix of weaker policy outlook from the Federal Reserve as well as a risk off sentiment in the market which saw the yen rallying on a safe haven bid. The markets continue to speculate on when and where the Bank of Japan might intervene after various officials came out strongly warning speculators on the recent gains in the currency.

On the economic front, data from the UK saw the industrial and manufacturing production data post another month of declines. Factory output in the UK declined strongly. While UK's manufacturing production fell 1.10% in February, industrial production was down 0.30%. On an annualized basis, manufacturing production was weaker 1.80% while industrial production contracted 0.50%. The GBPUSD was of course weaker throughout the week.

CANADA UNEMPLOYMENT RATE

SOURCE: WWW.TRADINGECONOMICS.COM | STATISTICS CANADA

Canada Monthly Unemployment Rate (March 2016)

The surprise of the week was Canada's monthly jobs report which came out surprisingly higher. An increase in full time employment saw the monthly employment change in Canada rising 40.6k, more than the forecasted 10.0k increase. This helped to push the Canadian unemployment rate from 7.30% to 7.10% in March. The participation rate was unchanged at 65.90% from the previous month.

UK Industrial Production (February 2016)

The week ahead will start off with China's inflation data. Expectations are for a 2.40%, up from 2.30% seen previously. China's Producer Price Index is also expected to improve but still show a negative print of -4.60% from -4.90% previously. Later in the week, China's GDP numbers will be released with expectations that the world's second largest economy saw a growth of 6.70% in the first three months of the year, down from 6.80% in the previous period.

The Bank of Canada and the Bank of England will be meeting next week. No changes are expected from either central bank at this week's meeting.

Inflation data is due over the week from the US, UK and the Eurozone and will likely be a key report to watch for. In the US, headline CPI is expected to rise 0.20% while core CPI is expected to rise 0.20% from the previous prints of -0.20% and 0.30% respectively.

TECHNICAL CORNER

WTI Crude Oil prices have seen some wild moves over the last week. Especially on Friday, prices turned bullish closing with over 5.0% gains, erasing the losses from the previous day. However, interestingly the equity markets did not rally with similar momentum, indicating that the Oil gains might be short lived. From the technical chart for Oil rolling contracts, we notice that on the daily chart, prices bounced off the lower median line and currently moving higher to test the minor resistance level near 40.86 - 40.09. We expect to see prices being capped near this resistance ahead of a new leg lower. Support to the downside comes in at \$34.81 - \$33.72. On the lower time frames, there is a clear indication of a bearish divergence that has been formed with the Stochastics posting higher highs against the lower highs in Oil.

Oil Rolling Contract (\$39.54) – Daily Chart

In the near term, if Oil prices fail to break above 40.86 - 40.09, we can expect a dip back to the lower support near the \$34.81 - \$33.72 levels. The downside is limited as Oil could be close to forming a new pivotal low above the previous lows formed at \$27 - \$26 region. Fundamentally, next week could prove to be important for Oil prices as OPEC members meet in Doha on April 17th to discuss oil production freeze talks.
