MARKETS PREVIEW

23rd of May – 27th of May 2016

Economic data this week was marked by GDP revisions from the UK and the US. Data from the ONS in the UK confirmed that the economy grew at a pace of 0.40% in the first quarter of the year, but the annualized GDP growth rate was revised down to 2.0% from the initial estimates of 2.10%. While services continued to drive the GDP higher, the quarterly growth rate slowed to 0.50% compared to the fourth quarter's growth of 0.80%. Manufacturing and construction output both fell during the three months of the year. Business investment in the UK also slipped marking a second consecutive quarterly decline.

In the US, the second estimates to the first quarter GDP was revised higher to 0.80% up from 0.50% increase seen in the initial estimates. Despite the upward revision, the 0.80% GDP growth still remains the weakest since Q1 of 2015. On an annualized basis, US GDP grew at a pace of 2.0%, same as in the previous quarter. The revised GDP also showed that US corporate profits during the first quarter, which rose at a pace of 1.90% from the fourth quarter.

US QoQ GDP, 2nd estimate – 0.80% (Q1 2016)

Inflation continues to be a worry for Japan as latest data released on Friday showed that the National Core CPI fell 0.30% on the month, same as in March. But the Bank of Japan's measure of core CPI increased at a slower pace, rising only 0.90% in April, down from 1.10% increase in March. The latest weak inflation data is likely to weigh on the BoJ when it meets for its monetary policy later in June.

The Bank of Canada also met this week and left the interest rates unchanged at 0.50%. The BoC however sounded cautious noting that the Alberta wildfires would put Canada's GDP into the negative in the second quarter. The central bank however noted that there

was no need to cut interest rates. The BoC said that the periods between April - June would be weak for growth and forecasted a 1% growth rate in the April forecasts but said that growth is likely to come back by the third quarter of the year.

Bank of Canada Interest Rate – 0.50% Unchanged (May 2016)

Week Ahead: 30th of May 2016, to 3rd of June 2016

The markets look to the new week with a slow start on Monday as both the US and UK markets will be closed due to bank holidays. However, the pace of the economic releases picks up with the inflation data from the Eurozone. Preliminary flash estimates on inflation showed that the Eurozone was back into deflation in May. A confirmation on this could put pressure on the ECB when it meets later this week on Thursday, June 2nd. While no changes to monetary policy is expected, the ECB could come out dovish on the euro.

This week will also see the PMI numbers coming out from China, US, UK and the Eurozone. Of importance will be the manufacturing PMI's. Overall forecasts are fairly dovish with manufacturing sector expected to have slowed down after an initial expansion in the first quarter. The US ISM manufacturing index is expected to show moderation, while in the UK manufacturing PMI is expected to post a second month of contraction.

In Australia, the first quarter GDP data is expected to show that the Australian economy grew at a pace of 0.60% in the first three months of the year. On an annualized basis, GDP is expected to rise only 2.70%, down from 3.0% in the fourth quarter of 2015.

The monthly nonfarm payrolls data will also be released this week. Expectations are mixed with the US unemployment rate expected to slide to 4.90%, but the monthly jobs is expected to rise 160k, same as last month.

TECHNICAL CORNER

NZDUSD has been steadily declining after prices failed to break above 0.7042 price level. The near double top pattern at the resistance saw prices posting a steady decline, closing Friday at 0.67. NZDUSD is likely to continue falling lower, with the next main support at 0.65 seen. Following the breakout from the rising median line, we identify the minor resistance at 0.6884 - 0.6866.

NZDUSD (0.6700) – Daily Chart

Ahead of a decline to 0.65, a pullback is likely to see NZDUSD retest the resistance level near 0.6884 - 0.6866. If the resistance holds, NZDUSD is likely to push lower over the coming weeks. Fundamentally, monetary policy divergence will be the main driving force with renewed optimism that the Federal Reserve will continue with its rate hikes. On the other hand, the RBNZ has been on a rate cut cycle, which should see NZDUSD weaken in the medium term..
