According to Markit's composite Purchasing Managers' Index, or PMI, business activity in the Eurozone fell to a 10-month low in September as the decline in two of the region's biggest economies - France and Italy - continued. The indicator fell to 52.0 from 52.5 in August. The average reading for Q3 as a whole - 52.8 - was also the lowest so far in 2014.

EUROZONE Composite PMI (Blue) against EURO GDP (Green)

The US employers accelerated hiring in September and the unemployment rate dropped to a 6-year low, intensifying speculations that the Federal Reserve will raise interest rates in mid-2015. The employment report is considered the most significant estimate of the economy's health ahead of the congressional elections in November 4.

NFP (Blue) Against Unemployment rate for USA

Technical Corner

As we can see on the EURAUD daily chart; the market successfully has broken the consolidation pattern at 1.4240s levels to end that technical pattern. Market now is testing the exponential moving average at 1.4360s level which in case any daily successfully close above these levels we would consider it as buying signal. In case the market is driving up we expect the first major resistance would be (as shown at chart) at 1.4950s and our target would be testing the previous high at 1.5700s levels. However , if market has started declining so the appropriate stop level would be any price under the last low as signaled on the below chart (1.3660s) .
